Products and Services Offering – Aeronautics Market

Markets that we serve

Our customers design systems & subsystems that include **safety critical embedded software** such as engine controls, avionics, and more. Our customers are typically Tier1 and Tier 2 suppliers to the aeronautics, defense, space, and automotive industries.

Challenge faced by our customers

Developing such critical systems requires

- Advanced skills linked to industry standards and cutting-edge methodologies
- Variable development throughput linked to product development cycles
- Producing these activities within ever shrinking budgets and development schedules

In support to our customer, CS Canada provides

- Advanced skills in embedded software development, validation, and verification
  - DO178B/C Architecture and Certification
  - Model-based Design
  - DO-326A (Cyber)
  - FACE (USA-Military)
  - Formal Methods
  - ARP4754A/4761
- A significant and on demand engineering capability
  - Onsite consultants / experts, or
  - Remote turnkey program delivery with 135 engineers in Canada, 25 in the USA, 175 in Romania, and a pool of expertise with 400 in France
  - With flexible business models to meet your expectations (T&M, FFP…)
- Advanced test tools to speed-up and lower ongoing costs of the activities
  - NADIA (test script generator based on natural language)
  - Test benches (HIL, SIL, Processor in the loop...)
- After-market
  - Embedded software loaders

Why consider CS Canada?

We have been involved successfully for more than 15 years with the most demanding and the highest level of critical systems in the aerospace industry with jet engine controls within DO-178C Level A certification with the largest OEMs in North America and many other critical systems for aeronautics, space, automotive, train, and industrial markets.
This expertise is now available at your service!
